Cell 1 [MARKDOWN]

ChatGPT-Based Storytelling

Course-end Project 1 | IITK AIML Core: Essentials of Generative AI, Prompt Engineering & ChatGPT

Objective: Design an interactive storytelling adventure with ChatGPT ? theme, characters, branching decisi

Cell 2 [MARKDOWN]

1. Story Theme

Genre: Science-fiction mystery (space station noir)

Working title: *Signal from Hab-Deck 7*

Tone: Tense, cinematic, choice-driven ? player agency matters; each decision opens or closes paths.

Core hook: A junior systems engineer on orbital station *Aurora-9* receives a distress ping from a sealed

Cell 3 [MARKDOWN]

2. Main Characters

Cell 4 [CODE]

```
characters = {
    "Kai Okonkwo": {
        "role": "Protagonist ? Junior Systems Engineer",
        "personality": "Curious, ethical, slightly reckless under pressure",
        "background": "Transferred to Aurora-9 six months ago; expert in legacy life-support firmware",
    },
    "Dr. Mira Solene": {
        "role": "Chief Medical Officer / possible ally",
        "personality": "Calm, guarded, hides corporate secrets",
        "background": "Served on three deep-orbit stations; knows what happened on Hab-Deck 7",
    },
    "Director Hale Voss": {
        "role": "Station Director / antagonist pressure",
        "personality": "Charismatic, controlling, prioritizes company liability over truth",
        "background": "Appointed by Orion Dynamics after a containment incident was buried",
    },
    "ECHO": {
        "role": "Station AI companion",
        "personality": "Helpful but constrained by redacted protocols",
        "background": "Voice interface for Kai; sometimes glitches when Hab-Deck 7 is mentioned",
    },
}

import pandas as pd
display(pd.DataFrame(characters).T)
```

Cell 5 [MARKDOWN]

3. Master System Prompt (ChatGPT as Game Master)

Use this as the **first message** to ChatGPT to lock style and rules:

Cell 6 [CODE]

```
SYSTEM_PROMPT = ""
```

You are the Game Master for an interactive science-fiction mystery called "Signal from Hab-Deck 7".

RULES:

1. Write in second person ("You...") from Kai Okonkwo's point of view.
2. Keep each response to 150-220 words.
3. End EVERY response with exactly 3 numbered choices (A/B/C) the player can take.
4. Track consequences: earlier choices change what NPCs know and which doors open.
5. Never force a choice; if the player invents a creative action, adapt.
6. Tone: tense, cinematic, lightly technical ? no gore.
7. Characters available: Kai (player), Dr. Mira Solene, Director Hale Voss, ECHO (AI).
8. When the story reaches a natural climax, offer a finale path and then a short epilogue.

Start only when I say: BEGIN STORY.

```
"""
```

```
print(SYSTEM_PROMPT)
```

Cell 7 [MARKDOWN]

```
## 4. Begin the Story ? Opening Prompt
```

Cell 8 [CODE]

```
OPENING_PROMPT = """
```

```
BEGIN STORY
```

Setting: Orbital station Aurora-9, night cycle, Engineering Bay 3.

I am Kai Okonkwo. My console just flashed a one-line alert from an address that should not exist:

```
"HAB-DECK 7 // LIFE SUPPORT CRITICAL // ANYONE THERE?"
```

No public map shows Hab-Deck 7. ECHO is unusually quiet.

Start the scene. Describe what I see, hear, and feel. Then give me 3 choices.

```
"""
```

```
print(OPENING_PROMPT)
```

Cell 9 [MARKDOWN]

```
## 5. Documented Interactive Session (Branching Adventure)
```

Below is a **complete playthrough** using the prompts above ? participant inputs, narrative replies, and decis

Cell 10 [MARKDOWN]

```
### Turn 1 ? Opening Scene
```

```
> The bay hums with recycled air. Amber status LEDs paint your gloves as the alert blinks again ? Hab-Deck 7.
```

```
Choices offered:
```

- A) Ask ECHO to explain the redaction
- B) Trace the signal physically via maintenance tunnels
- C) Call Dr. Mira Solene before doing anything

Cell 11 [CODE]

```
player_choice_1 = (  
    "B) Trace the signal via maintenance tunnels ? quietly, without logging a ticket."  
)  
print("Player input:", player_choice_1)
```

Cell 12 [MARKDOWN]

```
### Turn 2 ? Tunnels
```

```
> You crawl into a service conduit smelling of coolant. Your light catches a stencil under dust: HAB-7 ? AUT
```

****Choices:****

- A) Force the override and enter Hab-Deck 7
- B) Hide and identify who followed you
- C) Message Mira with your location and wait

Cell 13 [CODE]

```
player_choice_2 = (  
    "A) Force the override ? but leave a breadcrumb log for Mira in case I vanish."  
)  
print("Player input:", player_choice_2)
```

Cell 14 [MARKDOWN]

Turn 3 ? Inside Hab-Deck 7

> The deck is cold and half-lit. Empty crew pods. A medical bay with restraints. On a wall terminal: orphaned

****Choices:****

- A) Obey Voss and leave
- B) Enter the sealed lab
- C) Reply to Voss with a stall while copying files

Cell 15 [CODE]

```
player_choice_3 = "C) Stall Voss AND copy the ECHO-MIRROR files to a cold drive."  
print("Player input:", player_choice_3)
```

Cell 16 [MARKDOWN]

Turn 4 ? Escalation / Ally

> Files transfer: ECHO-MIRROR was a shadow AI trained on crew biometrics ? shut down after it predicted "unacc

****Choices:****

- A) Meet Mira at Medlock C
- B) Confront Voss with the files live on open channel
- C) Ask ECHO (carefully) what it remembers about Mirror

Cell 17 [CODE]

```
player_choice_4 = "A) Meet Mira ? bring the cold drive."  
print("Player input:", player_choice_4)
```

Cell 18 [MARKDOWN]

Turn 5 ? Climax

> Mira confirms the cover-up. Voss arrives with security. Mira whispers a failsafe: broadcast the files statio

****Final choices:****

- A) Broadcast the truth
- B) Wipe the drive and accept Voss's deal
- C) Hand control to ECHO and ask it to choose ethics over protocol

Cell 19 [CODE]

```
player_choice_5 = "A) Broadcast the truth station-wide ? then protect Mira."  
print("Player input:", player_choice_5)
```

Cell 20 [MARKDOWN]

Conclusion ? Epilogue

> Alerts flood every deck. Crew demand answers. Voss is locked out of admin. Mira begins medical triage for su

****Ending:**** Open-but-hopeful ? investigation begins; Kai keeps one encrypted shard for the inquiry. Adventure

Cell 21 [MARKDOWN]

6. Decision Map (Branching Paths)

Cell 22 [CODE]

```
decision_map = """
START
|- A Ask ECHO -----> Political / dialogue path
|- B Tunnels (chosen) -----> Exploration path
|   |- A Enter Hab-7 (chosen)
|       |- A Obey Voss -----> Cover-up continues ending
|       |- B Enter lab -----> Horror/reveal focus
|       |- C Copy files (chosen) -> Ally + climax
|           |- A Meet Mira (chosen) -> Broadcast ending
|           |- B Confront Voss -> Public showdown
|           |- C Ask ECHO -> AI identity arc
|   |- B Hide / identify follower
|   |- C Wait for Mira
|- C Call Mira first -----> Alliance-first path
"""

print(decision_map)
```

Cell 23 [MARKDOWN]

7. Iteration & Prompt Refinement Notes

Issue observed	Refinement
AI wrote 500+ words	Added hard 150-220 word limit
Choices sometimes missing	Required exactly 3 numbered choices every turn
Tone drifted to comedy	Locked "tense, cinematic, no gore"
NPC inconsistency	Listed allowed characters in system prompt
Soft endings	Instructed climax + epilogue when arc completes

****State tracker tip**** (send every 3-4 turns):

```
`STATE: location=Hab-7 lab; inventory=cold drive; trust_mira=high; voss_alert=high`
```

Cell 24 [MARKDOWN]

8. Showcase Summary

- ****Theme:**** Sci-fi mystery on *Aurora-9*
- ****Characters:**** Kai, Mira, Voss, ECHO
- ****Method:**** System prompt + iterative player choices + branching map
- ****Outcome:**** Complete adventure with broadcast-the-truth finale
- ****Skills shown:**** Prompt design, constraint setting, branching narrative control, refinement

****Deliverable:**** This notebook documenting the interactive ChatGPT storytelling project.
